

Project Presentation

BADM554 Enterprise Database Management Fall 2023

Group 3 Alia Khan, Chih-Yu Hsu, Courteney Chan, Preethi Peelamedu Surendran

Agenda

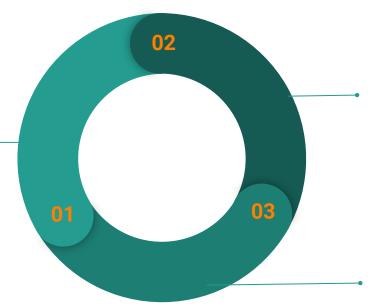

Introduction

Convert Yelp JSON data(semi-structured) to MySQL(structured) with proper metadata specification.

Mini project 2

Experience in learning a new domain(blockchains) in order to get business insights, by practicing your knowledge of SQL and Data Modeling.

Mini project 3

Experience working with MongoDB, Knime, and API's. Experience in setting up a cloud database, accessing it via a third-party tool(Knime), and then processing and querying it.

Project 1

Yelp JSON to MySQL

Query 1

Looking up where most people would go for restaurants to select the ideal location

```
[22] %%sql
     SELECT city, state, ROUND(AVG(review_count),0) AS average_review_count
     FROM business
     WHERE review count > 100
     GROUP BY city, state
     ORDER BY average review count DESC
     limit 50
      * mysql://B03:***@testproject.mysql.database.azure.com:3306/B03
     50 rows affected.
                         state average review count
             city
     North Redington Bch
                         FL 1175
     Glendora
                         NJ 494
     High Ridge
                         MO 436
     Vincentown
                         NJ 430
     Clearwater Beach
                         FL 417
```

Query 2

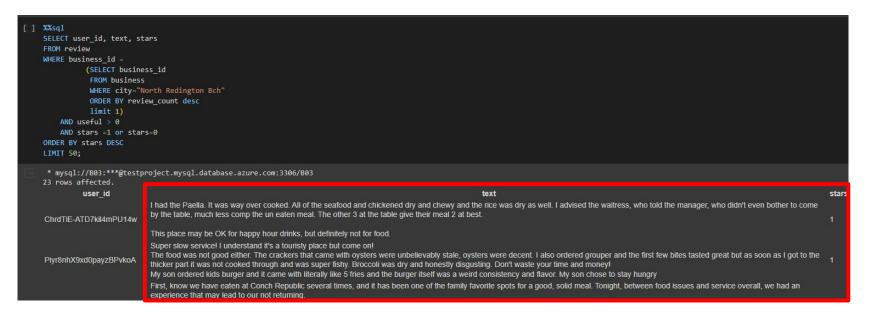

Examine all kinds of the businesses in that city to choose the top category to open

```
%%sq1
SELECT *
FROM business
WHERE city="North Redington Bch"
ORDER BY review count desc
 * mysql://B03:***@testproject.mysql.database.azure.com:3306/B03
4 rows affected.
index
             business id
                                 name address
                                                         state postal code
                                                                              latitude
                                                                                          longitude
                                                                                                      stars review count
                                         16699
                                                North
                               Conch
                                        Gulf
66898 CgiwCrXs3Ggu9eKFPIgjtA
                               Republic
                                                Redington FL 33708
                                                                          27 8158617895 -82 8206042306 4 0 1175
                               Grill
                                         Blvd
                                                Bch
```

Query 3

Identify users who rate the selected restaurant with 0 or 1 star to understand and address potential shortcomings from their reviews

Query 4

Find out the influential users to focus on addressing the problems mentioned in their negative reviews

```
SELECT u.user id, u.name, u.fans, u.review count, u.useful, u.average stars, r.business id
    JOIN review AS r ON u.user id = r.user id
    WHERE u.user id IN (
        SELECT user id
        FROM review
        WHERE business id = (
            SELECT business id
            FROM business
            WHERE city = "North Redington Bch"
            ORDER BY review count DESC
            LIMIT 1
        AND useful > 0
        AND (stars = 1 OR stars = 0)
    AND r.business id = (
        SELECT business id
        FROM business
        WHERE city = "North Redington Bch"
        ORDER BY review_count DESC
        LIMIT 1
    ORDER BY u.fans DESC;
     * mysql://B03:***@testproject.mysql.database.azure.com:3306/B03
                                                                                   business id
     xUKYtNL3tRf15PtJI5O3jA E
                                                                              CqiwCrXs3Gqu9eKFPIqitA
     3Aq2OdMHz-N9mJ344 bXcA Jessica
                                                                             CgiwCrXs3Ggu9eKFPlgitA
     8Z-P3tBnUUjySrflmJYE1Q Scott
                                                             .82000000000000003 CgiwCrXs3Ggu9eKFPlgitA
```

Query 5

Examine the attributes of the selected restaurant and see how we can improve to compete with the current restaurant

```
%%sal
SELECT attributes
FROM business
WHERE business id = (
    SELECT business id
     FROM business
    WHERE city = 'North Redington Bch'
    ORDER BY review count DESC
     LIMIT 1
 * mysql://B03:***@testproject.mysql.database.azure.com:3306/B03

Explore JSON Data

Gained proficiency in handling JSON data and determine how it maps to database tables.

Transform data

Learned how to load JSON data into a Pandas DataFrame for manipulation

Develop Business Value Queries

Translated data analysis into actionable business strategies, understanding how data drives decision-making.

Project 2

NFT Sales Analysis on Ethereum Blockchain

Cryptopunks

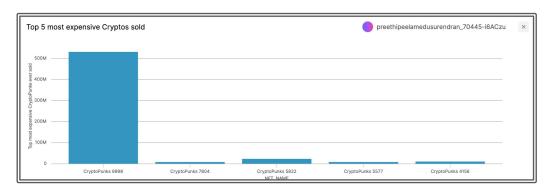

- Cryptopunk originated in July 2017
- The image of 10,000 pixel art
- No two alike images
- Popular
 - Oldest
 - One of the most successful
 - Expensive

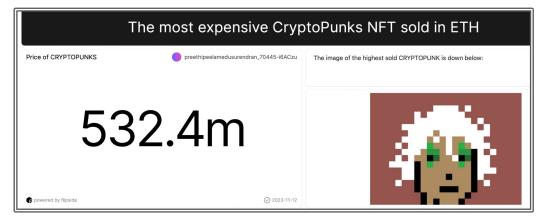

Top 5 Most Expensive Sales

- In 2017 a CryptoPunk valued at 0.05 ETH.
- It is currently at 57.2 ETH.
- 1ETH = 2249.98 USD as of today.

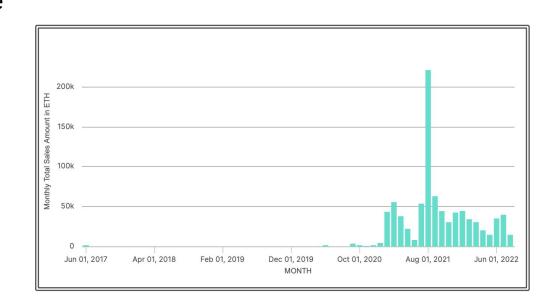

Sales Growth

- Started of with \$61.89 average sale in the month of June 2017.
- Highest average sale recorded was in October 2021 for a whopping average of \$490,093.64
- The average sales has only dropped since then with no significant peak

Mini Project 2 - Cryptopunk Analysis

Blockchain Concepts:

Understanding the basics of blockchain technology and NFT.

Data Analysis

Extracting meaningful insights from blockchain data, including sales trends and statistics.

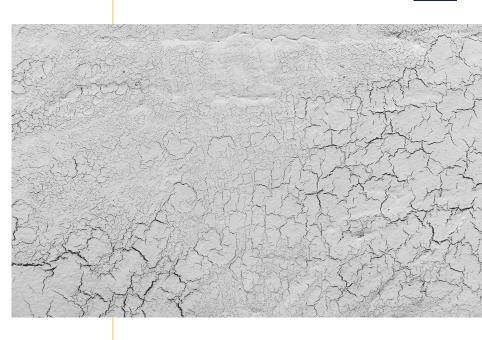

Query optimisation

Writing efficient queries to retrieve relevant information from a large dataset.

Project 3 Yelp & NFT In Knime

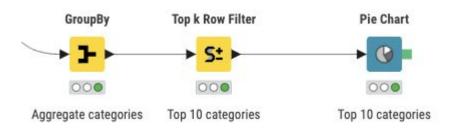

Mini Project 3 - Yelp

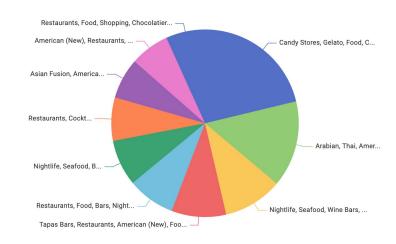

Workflow

Select top 10 categories from business table

Top 10 catrgories

Candy Stores, Gelato, Food, Coffee & Tea, Restaurants, Desserts, Patisserie/Cake Shop, Specialty Food, 🤞 1/9 🕨

Mini Project 3 - Yelp

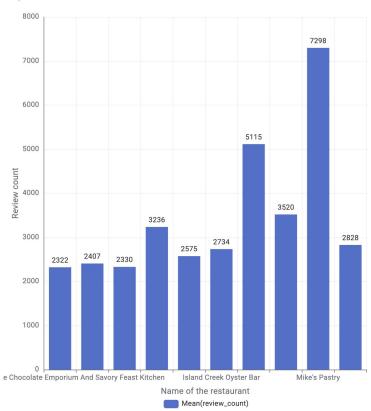

Workflow

Select top 10 user rated from business table

Top rated Restaurants

Mini Project 3 - Yelp

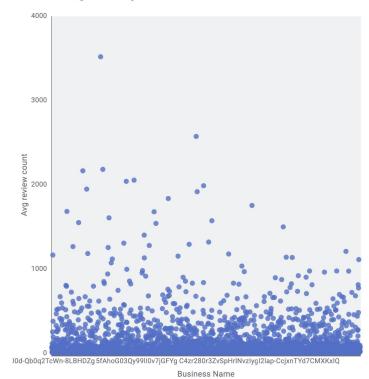

Workflow

Count average review to determine dynamics of each restaurant

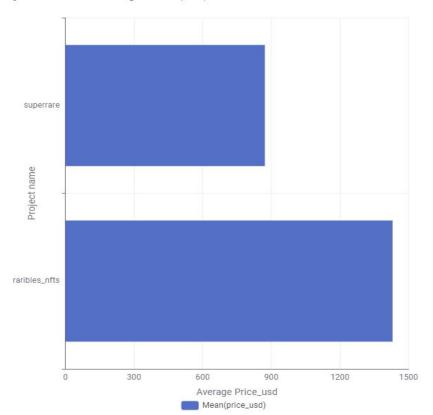

Understanding Review Dynamics

Mini Project 3 - Cryptopunks

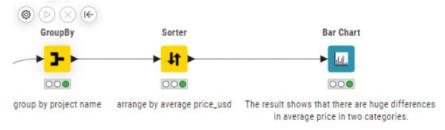

Project Name vs. Average Price (usd)

Workflow

Grouped by Project_name, calculate average price and conduct visualization.

The result shows that there are huge differences in average price in two categories.

Mini Project 3 - Cryptopunks

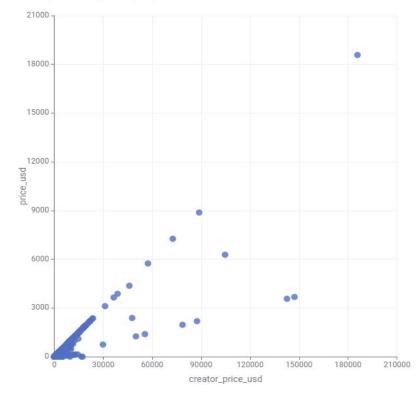

Workflow

Determine relationship between creator price and nft price.

The result shows that there is a positive relationship between two prices.

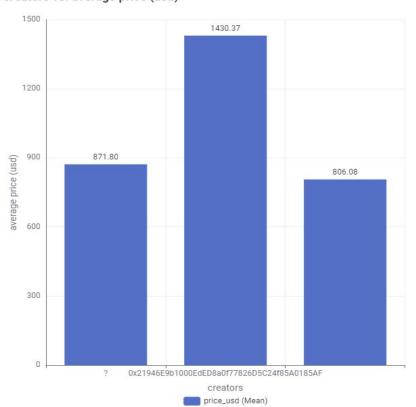

Mini Project 3 - Cryptopunks

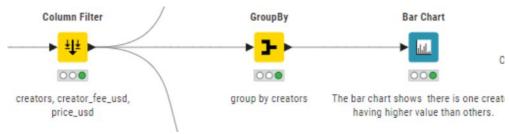

creators vs. average price (usd)

Workflow

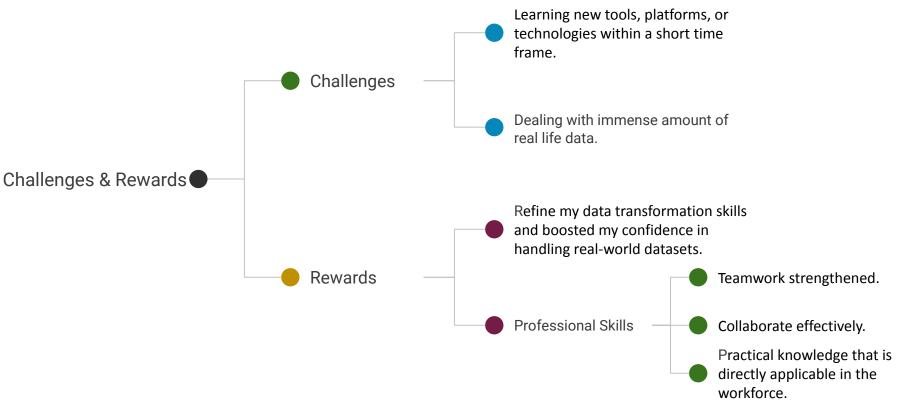

Group by creators, determine which one created the highest values.

The result shows that shows there is one creator having higher value than others.

Challenges & Rewards

Thanks!
